PROFESSIONAL SUMMARY

AI-focused Python Developer with hands-on experience in building scalable web applications using Django and integrating Large Language Models (LLMs) through LangChain. Experienced in developing Retrieval-Augmented Generation (RAG) systems, REST APIs, prompt engineering, and AI automation. Strong knowledge of NumPy, Pandas, data preprocessing, and backend development. Passionate about building production-ready AI-powered applications combining modern web technologies with Generative AI.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), HTML5, CSS3

Backend & Tools: Django, Django REST Framework (DRF), RESTful APIs

Databases: MySQL, SQLite

AI & Agentic-AI: LangChain, LLM Integration (OpenAI/Gemini APIs), Prompt Engineering, AI-driven Automation

Data Science: NumPy, Pandas (basic knowledge)

INTERNSHIP EXPERIENCE

Interlimate Enterprises (*Frontend Developer Intern Training*)

June 2025 – August 2025

Panipat, India

- Transformed high-fidelity Figma designs into responsive, cross-browser compatible web pages using HTML5/CSS3/React js.
- Collaborated with the backend team to consume Django APIs, improving data loading speeds.
- Debugged and resolved UI/UX issues across multiple client projects, ensuring 100% design accuracy.

TECHNICAL PROJECTS

AI Email Automation System | *LangChain, Hugging Face, ChromaDB, Gmail API*

- Built an AI-powered email automation system using LangChain with a multi-agent workflow to automatically categorize customer emails, retrieve relevant knowledge, generate professional replies, and create Gmail draft responses.
- Implemented a RAG pipeline using ChromaDB and Hugging Face embeddings for context-aware responses.
- Designed specialized AI agents for email categorization, RAG query generation, response generation, and quality assurance using LangChain.

YouTube AI Assistant Extension | *LangChain, RAG, Python, FAISS, YouTube API*

- Developed an AI-powered browser extension that allows users to ask questions about long YouTube videos and receive context-aware answers instantly.
- Built a Retrieval-Augmented Generation (RAG) pipeline by extracting video transcripts, splitting them into semantic chunks, generating embeddings, and storing them in a FAISS vector database.
- Integrated LangChain with Large Language Models (LLMs) to retrieve relevant transcript sections before generating accurate responses, significantly reducing hallucinations.

Student Portal | *Django, MySQL, HTML5/CSS3*

Mar 2026 – Apr 2026

- Developed a secure, centralized student portal featuring role-based authentication for students, faculty, and administrative staff.
- Implemented dynamic dashboards to manage and display academic profiles, internal marks, attendance tracking, and fee status.
- Optimized relational database schemas in MySQL, utilizing advanced indexing to improve query performance for high-concurrency student traffic during result declarations.

Document Question Answering using RAG | *LangChain, FAISS, Hugging Face*

Jan 2026 – Mar 2026

- Developed a Retrieval-Augmented Generation (RAG) chatbot capable of answering questions from PDF documents.
- Implemented document chunking, embedding generation, semantic similarity search, and context retrieval using FAISS.
- Integrated Hugging Face language models with LangChain to generate context-aware and accurate responses.

EDUCATION

Chandigarh University

Bachelor of Computer Applications (BCA)

2023 – 2026

Completed

S.K Mother International School (CBSE)

Senior Secondary (Class XII)

2023

Completed

CERTIFICATIONS

- Samsung Innovation Campus:** Artificial Intelligence Certification (Agentic AI & AI-driven solutions).

- **Walmart USA (Forage):** Advanced Software Engineering Virtual Experience (Data Structures & System Design).
